Prototype airsports equipment in accordance with FAI Sporting Codes Sect. 7A, Version 2012, for uncertified gliders Section 12.2.2.2 and Section 12.2.3.2. Pilots must provide appropriate test protocol documentation. • Helmet tested in accordance with EN 966 • Valid licence or foreign licence with additional endorsements for microlight tow launching. • Valid third party insurance • FAI Sport licence (must be valid at registration!). • Signed Liability and Participation agreement documents for DHV competitions. <p>All documents will be examined at registration. If an FAI license is not presented, participants will be scored in the appropriate National championships, but not in the International competition and no points for the world ranking lists will be attained.</p> <p>Pitch-Measurements</p> <p>Pitch measurements in accordance with FAI regulations current at the time of this invitation will be made for class 1 hanggliders. Voluntary pitch measurements can be made by all pilots on the day prior to the first task. We strongly recommend all pilots to perform these measurements if they are not absolutely sure of their hangglider settings, or have not measured them for a longer period of time.</p> <p>Measurements during the competition will normally be made at the landing field, but may also be made at the launch site should situations require this. All measurements with the exception of voluntary measurements at competition begin, will be publicised.</p> <p>Measurements will be made by levelling the hangglider and applying full VG. Sprog angles relative to the keel tube will be used for measurement recording. If necessary, different procedures may be used by the test organisers.</p> <p>All hanggliders must have pitch settings corresponding to those recorded by an FAI recognised test organisation. All hanggliders with pitch settings less than this will not be allowed to start, and the competition manager will be informed.</p> <p>Should measurements at the end of a task indicate that a hangglider has insufficient pitch settings, penalties in accordance with those defined in FAI section 7a for cloud flying will be applied. In addition, the pilot must re-trim the glider, and the glider may only launch again after a renewed measurement has been performed to verify correct settings.</p> <p>Measurements will be made with digital protractors with an accuracy of 0.1° or better. In accordance with CIVL SC-HG 2012 the permitted total maximum error is 1°. Measurement differences within this margin of error will not result in gliders being grounded. Pilots will be informed of the measurement inside these margins of error, and will be required to sign documents stating their recognition of them</p>
