RECOMMENDATION FOR EXCHANGE

*Improved inner container for CHARLY reserves available
Also applies to KORTEL Krisis Karré und MAC PARA Houston*

An improved version of the Tom Grabner inner container is now available for all CHARLY Second Chance and DIAMONDcross rescue systems as well as for the KORTEL Krisis Karré and MAC PARA Houston reserves. As before, the new container has two separate compartments for the lines and the canopy, so that the canopy is only released after the lines have been stretched, minimising the risk of entanglements between the reserve and the glider. A new feature is that the canopy compartment is slotted, making deployment more reliable even with low airflow or sub-optimal packing. The updated container has been officially approved by the AIR TURQUOISE certification authority after appropriate deployment and strength tests.

Opening of the top cover and release of the lines.

The canopy compartment remains closed until the lines are stretched.

Air intake starts at the canopy base.

Owners of one of the reserves mentioned above can order the new inner container directly from CHARLY, KORTEL or MAC PARA for €6 (regular price €32) plus shipping. Please specify the container size (= container colour) when ordering.
